Hi Year 7,

Hope you are all doing OK.......hope more of you are managing the work you are being set.

Some of you have been outstanding - keep this up. However, we do realise it's difficult so don't feel bad if you find something difficult or challenging. If you can't get help straight away at home you should e-mail your teacher. We are all really keen to help you and are here for you. Let us know any issues and we will help.

Please have a look at Mrs Cartledge's news review and surviving lockdown presentation as there are some interesting ideas. This week's message builds on last week and is to think about is, "How can we use this to improve the environment"?

Many of you (and young people across the world) care deeply about the environment and future of the planet. I have noticed many changes just in my garden over the last few weeks. That could be the reduced noise from cars and listening to more birds singing or not really seeing any planes flying into Leeds and Bradford airport every day. Pollution levels have dropped a lot in the last few weeks.

People can make a difference by acting in a different way in their local area. Is there something you care about with the environment that you can continue to improve in the future? If you want to e-mail any ideas I can save them and we can discuss these at school when you eventually restart.

You may realise that government guidelines have changed from today so more is allowed outside the home. However, we all still have a responsibility to keep our distance from other people and not to take risks. That way things can continue to improve. Talk to your parents about this if you are unsure. Or you can e-mail me for more guidance.

Remember:
1) Keep up with your work but tell us if you need help
2) Stay safe online (as well as physically)
3) Keep as active as you can - but always stay safe

Stay safe Year 7, keep going, you are doing brilliantly!
Mr Booth
